
Protecting the **Future** of Modular Construction

Complete, Compliant, and Custom
Solutions for Modular Container Facilities

Everest Fire Protection –
Smarter Fire Safety for Smarter Energy

Who We Are

From containerized clinics to modular data centers, Everest Fire Protection delivers fast, flexible, and fully compliant fire protection systems tailored for the world of modular construction.

We understand the challenges of off-site manufacturing, compressed timelines, and complex permitting, and we're built to help you overcome them.

Why Fire Protection Is Critical in Modular Construction

Compressed Project Timelines:

Delays are costly—our pre-engineered systems help you move fast and stay on track.

Multi-Site Compliance:

We design systems that meet NFPA, local, and industry-specific requirements across jurisdictions.

Sensitive Install Environments:

Our suppression options protect electronics, healthcare equipment, and more.

Scale + Flexibility

Modular builds require scalable systems. Everest provides designs that grow with your projects.

Our Modular Construction Fire Protection Capabilities

Suppression Systems

- Clean Agent & Inert Gas (residue-free protection)
- Water Mist (efficient, effective with minimal cleanup)
- CO₂ Systems (ideal for unoccupied modular units)
- Wet Sprinklers (reliable cost effective solutions)

Detection Systems

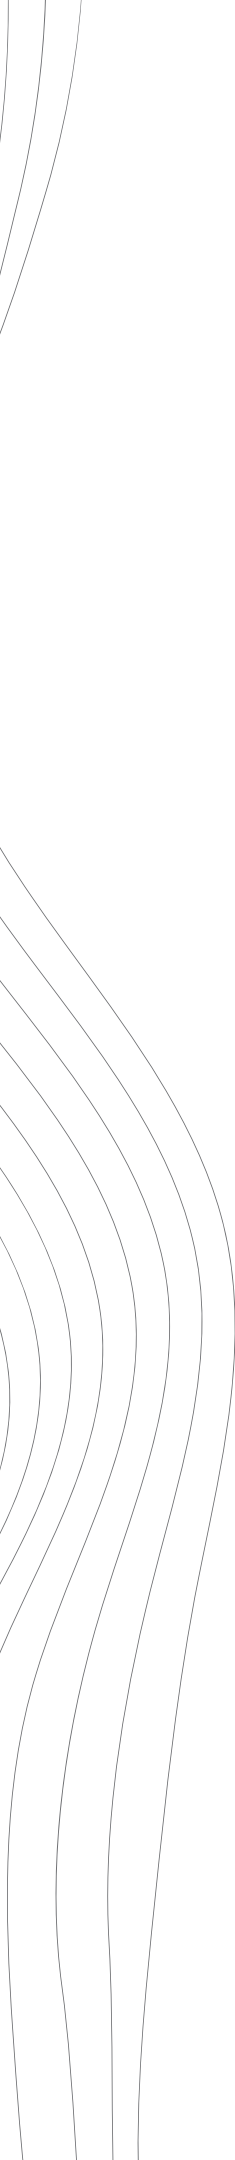

- Air-Aspirated Smoke Detection
- Beam, Gas & Off-Gas Detection
- Linear Heat and Thermal Sensors
- Li-Ion Off Gas Detection

Consulting Services

- Code compliance from modular construction to field site
- Support for multi-state permitting and pre-approvals
- Proven success supporting distributed container projects

Design & Engineering

- Custom layouts for modular container specs
- Clean integration with off-site construction processes
- Rapid install and easy future servicing

From Builds to Local Compliance

Everest coordinates with global suppliers, handles U.S. permitting, and ensures your facility is fire-code ready, fast!

1

Design & Consulting

We partner with your project managers and OEMs to design, approve, and document fire protection systems that work from factory to field.

2

Seamless Installation

Our team delivers fast, expert installation of modular-ready systems, minimizing disruption and simplifying inspections.

3

Ongoing ITM Support

Once your modular units are deployed, Everest continues with regular Inspection, Testing, and Maintenance for business continuity.

4

Custom Engineering

Pre-engineered suppression and detection packages designed specifically for containerized construction.

Why Everest Is the Fire Partner Modular Builders Trust.

Decades of Modular + Industrial Experience

Systems Pre-Approved for Faster Timelines

Deep Code & Compliance Expertise

Clean Agent + CO₂ + Water Mist +
Detection Solutions

Support Across Healthcare, Data, Retail,
and Industrial Modular Builds

Support Across multi-state locations

One Partner. One Source.

From strategy to install, Everest Fire Protection helps modular builders move faster, safer, and more efficiently—without compromise
